Number of Rows	12	<p>*Extended rainfall during bloom (23 days in May + first 10 days in June) contributed to plant stress and lower than normal yield</p> <p>*3.75 lb/ac magnesium applied in the fall</p>						
Seeds per Acre	20,000							
Precipitation (in)	28.4	<p><b>Cooperator:</b> Bob &amp; Steven Beakley</p> <p>Four replications of each hybrid are planted in a randomized block design. Model : yield = hybrid blk. SAS 9.4 was used for statistical analysis. LSD provided when hybrid significant at p &lt; 0.05. Yields highlighted in yellow are not statistically different from the top ranked hybrid. Plots were planted using a SRES Advanced planter with Monosem units. Plots were harvested with a JD 3300 plot combine fitted with a Harvest Master GrainGage System. Precipitation data was recorded from January 1 through the harvest date.</p> <p>For additional information contact: Dr. Ronnie Schnell / Katrina Horn ronschnell@tamu.edu / khorn@tamu.edu 979-845-2935 / 979-845-8505</p>
